

# AUSTRIA 2050

*Fit for the future*

*The Book* How could or should Austria look in the year 2050? What influence will the already recognisable global political trends and developments have? What opportunities and chances open up through them and what risks and problems might arise? And finally: What roles will education, science, research and innovation play? The book Austria 2050 attempts to find answers to these questions. Well-known experts from various areas – among them education, science and research, demography, migration, environment and climate change, global development and many more – present their suggestions on how to shape the future, inviting discussion and debate. The goal of all the articles is, during a time of rapid change and the feeling of insecurity arising from it, to once again find new bearings and the courage to act.

- T.O.C.*
- Preface, Introduction
